

CIRCUIT BOARD CONNECTIONS KEY

(printing on card stock is recommended)

1. Turn off all power to both the main power switch and the battery box to prevent any short circuits while you work.

2. Cut out the template along outer edge.

3. Puncture the four holes in the template.

4. If you've already secured the circuit board, carefully remove the screws.

Align the template onto the circuit board, and screw it down with the four screws as shown in the diagram.

5. Turn all power back on if needed.
